Safety is everyone’s concern. Taking an active role in workplace safety and the safety of your employees is a not only top business concern, but simply the right thing to do.

Many of us are guilty of going about our daily work lives without any second thoughts to the cord taped down on the shop floor or pile of fabric blocking the fire exit. But these hazards and many others can amount to additional expenses for your business: penalties for non-compliance, hospital bills, lawsuits, lost productivity, and a tarnished public image.

These costs can be prevented by educating and empowering each of your employees to recognize concerns and then addressing them properly.

Whether your company is looking to address a specific safety concern or wishes to outsource an entire safety program, MMTC offers a variety of services to meet your needs.

AVAILABLE SERVICES

Mock OSHA Audit
Even the most robust and well thought out safety programs can benefit from an objective, third party review. Audits identify the effectiveness of safety program management and can be used as a guide to assure regulatory compliance and a safe workplace; ensuring that problems and hazards are recognized and addressed before they result in accidents or injuries.

A consultant will walk through the entire facility like an OSHA compliance officer, looking for anything that a real officer would find as non-compliant and as potential violations under OSHA/MIOSHA regulations. This extensive audit includes an inspection of all of work areas. A detailed report with photos and corrections is supplied following the audit.

Safety System Gap Analysis
This comprehensive analysis digs into culture, policies, training, systems, and compliance. The interactive process involves visual inspection, discussions with associates and management, and a review of plans/policies. The thorough onsite review of the facility allows the safety consultant to gather data, observe operations, and begin to identify program needs. An analysis of existing safety policies in comparison to regulatory requirements identifies gaps and areas of improvement. A culture survey will
gauge employee perceptions on the existing safety program, attitudes toward safety, and overall level of engagement. The final report includes a presentation and explanation of the findings, recommended corrective action, and identification of training requirements.

**Leadership & Safety Culture: What is your role?**
A culture of safety begins at the top of an organization. Whether a company is introducing safety as a guiding principle for the first time or re-aligning an already existing culture, this course is specifically designed for leaders (senior management) and those with supervisory responsibilities (foremen, supervisors, team leaders). Participants will learn critical safety leadership skills that will create and sustain safe and productive companies.

**OSHA 10-Hour General Industry**
Developed by OSHA to provide important safety information on fundamental OSHA standards as they apply to General Industry. Ideal participants are any employee not in supervisory role.

Topics include: Introduction to OSHA; Walking & Working Surfaces, including Fall Protection; Exit Routes, Emergency Action Plans, Fire Prevention Plans & Fire Protection; Electrical; Personal Protective & Lifesaving Equipment, Hazard Communication; plus additional elective topics customized towards your industry. Cost includes OSHA Training Manual 29 CFR 1910.

**Safety Supervisor Mentoring**
Partner with our safety consultant to mentor your in-house safety representative. This program will be specifically tailored to meet the needs of each company. The mentoring program includes regularly scheduling sessions with the safety consultant to review pertinent regulations, gain insight and tips on effective training, assist with the set up and leading of a safety committee, safety tool box talks, and the development or revision of necessary policies.

**Accident / Near Miss / Root Cause Analysis**
Your company has just experienced an incident resulting in an unintentional injury to an employee or a near miss. Now what? Reacting quickly to the incident with a prescribed procedure and actions demonstrate your company’s commitment to safety and ensures the proper information is collected to fulfill an incident investigations ultimate purpose - to prevent future incidents. This training is intended for your safety team, or anyone who will be doing such an investigation.
